

Superstore Sales Performance Dashboard

Project Overview

The **Superstore Sales Performance Dashboard** is an interactive Power BI dashboard developed using the **Sample Superstore** dataset. It provides a comprehensive overview of sales, profit, customer orders, and product performance in a single-page report. The dashboard helps users analyze business performance through interactive visuals, KPIs, and filters, enabling faster and data-driven decision-making.

Objectives

- Monitor overall business performance using key KPIs.
- Analyze monthly and yearly sales trends.
- Compare sales and profit across different product categories.
- Identify the most profitable sub-categories.
- Evaluate sales and profit across different states.
- Provide interactive filtering using Region and Year slicers.

Tools & Technologies Used

- Microsoft Power BI Desktop
- Power Query Editor
- DAX (Data Analysis Expressions)
- Data Modeling
- Conditional Formatting

Dashboard Components

1. KPI Cards

The dashboard includes seven KPI cards that provide an instant summary of business performance.

- **Average Discount:** Displays the average discount offered on products.
- **Average Order Value:** Shows the average revenue generated per order.
- **Total Sales:** Represents the overall sales revenue.
- **Profit Margin:** Displays the percentage of profit earned from total sales.
- **Total Profit:** Shows the total profit generated.
- **Total Quantity:** Represents the total number of products sold.
- **Total Orders:** Displays the total number of customer orders.

These KPIs provide a quick snapshot of the company's overall performance.

2. Region and Year Slicers

Interactive slicers are provided to filter the dashboard by **Region** and **Year**. Selecting a specific region or year updates all visuals simultaneously, allowing users to analyze data for a particular business segment.

3. Monthly Sales Trend

Visual: Line Chart

This chart displays monthly sales performance throughout the year. It helps identify seasonal trends, sales fluctuations, and peak-performing months. The visual enables users to understand how sales vary over time and supports trend analysis.

4. Sales vs. Profit Analysis

Visual: Scatter Chart

The scatter chart illustrates the relationship between sales and profit for different products. It helps identify products with high sales but low profit as well as products generating both high sales and high profit. This visualization is useful for understanding product profitability and business efficiency.

5. Yearly Sales & Profit Overview

Visual: Line and Clustered Column Chart

This visual compares yearly sales and profit in a single chart.

- **Columns** represent yearly sales.
- **Line** represents yearly profit.

It clearly shows the growth of the business from **2014 to 2017** and helps compare revenue generation with profitability over different years.

6. Sales by Category

Visual: Donut Chart

This chart displays the contribution of each product category to total sales.

Categories include:

- Technology
- Furniture
- Office Supplies

It helps identify which category contributes the highest share of revenue.

7. State-wise Sales & Profit

Visual: Filled Map

The map visual displays sales and profit across different states. It allows users to compare regional performance and quickly identify states generating higher sales and profit. This geographic representation makes regional analysis more effective.

8. Profit by Sub-Category

Visual: Horizontal Bar Chart

This chart compares profit generated by different product sub-categories such as Copiers, Phones, Accessories, Paper, and Binders.

Conditional Formatting

Conditional formatting has been applied to this visual to improve readability and highlight business performance.

- **Green bars** indicate sub-categories with **positive profit**.
- **Red bars** indicate sub-categories with **negative profit (loss)**.

This formatting allows users to instantly identify profitable and loss-making sub-categories without analyzing individual values, making decision-making quicker and more effective.

9. Product Details

Visual: Table

The Product Details table displays product names and related information, providing a detailed view of the products included in the analysis. It complements the summarized visuals by allowing users to explore individual product data.

10. Profit by Category

Visual: Pie Chart

This chart shows the profit contribution of each product category. It helps compare category-wise profitability and identify which category contributes the most to the overall profit.

Key Insights

- The company generated **\$2.3M** in total sales with a **12.47%** profit margin.
- A total of **5,009 orders** resulted in the sale of **38K** products.
- **Technology** is the highest-performing category in terms of both sales and profit.
- Sales and profit show a steady upward trend from **2014 to 2017**.

- The scatter chart indicates a positive relationship between sales and profit while highlighting products with lower profitability.
- The state-wise map helps identify high-performing regions.
- Conditional formatting in the **Profit by Sub-Category** chart makes it easy to distinguish profitable and loss-making sub-categories.

Conclusion

The **Superstore Sales Performance Dashboard** provides a comprehensive and interactive view of business performance by combining KPIs, charts, maps, tables, and slicers in a single report. It enables users to monitor sales trends, evaluate profitability, compare category performance, and analyze regional sales effectively. The use of **conditional formatting** further enhances data interpretation by visually highlighting profitable and loss-making sub-categories, making the dashboard an effective tool for business analysis and informed decision-making.
